COMMUNITY FACT SHEET
Zufall Health Center
Dover, NJ

Program Overview
The pharmacist at Zufall Health Center meets with patients individually, completes the Patient Self-management Credential with them, reviews their health conditions and their medications, and explains in easy-to-understand language how patients can best take care of themselves. Patients are not charged for visits with the clinical pharmacist to make it affordable and accessible. Medication and lab costs are also covered as needed.

Program Partners
Zufall Health Center is a Federally Qualified Health Center serving northwestern New Jersey's underserved population as a medical and dental home. Zufall’s bilingual staff includes the pharmacist, pharmacy students, certified medical assistants, Licensed Certified Social Workers, patient navigators, physicians, dentists, and nurse practitioners. Health care is offered to residents of Morris, Sussex, Hunterdon, and Warren counties. All patients are welcome, regardless of income or insurance status. The services provided are patient-centered and culturally sensitive.

Community Champions: Rina Ramirez, M.D. and Teresita Lawson, RPh, CDE

Patient Profile
The patients served through Project IMPACT: Diabetes in northwestern New Jersey are often uninsured or underinsured and working multiple jobs. Patients are indentified as high risk according to evidence based guidelines for their condition(s), in addition to meeting criteria that increases their risk for adverse drug events. These criteria include 5 or more medications, multiple conditions, and multiple providers. Preventable care is not a choice for many patients who live 200% below the poverty level. They are unfortunately and frequently forced to choose between buying food or buying their medication. With approximately a 65% Hispanic patient-population, language and culture are main barriers to care as well as their level of health literacy. Many patients do not comprehend why medications are necessary to control their disease. Providing a continuum of care can be difficult with patients in transient living situations and phone numbers often continually change.

Pharmacists’ Role on the Collaborative Care Team
Providers refer eligible patients for participation in Project IMPACT: Diabetes. The pharmacist meets with each patient individually for a minimum of 30 minutes per visit. During the visit, the pharmacist reviews the patient’s condition and medications. Diabetes management is explained to each patient in a language comfortable to the patient, and the pharmacist assesses each patient for comprehension of the information supplied, adherence, and compliance. Barriers to diabetes care are also uncovered during individualized sessions. After the appointment, the pharmacist and other health care providers work collaboratively to generate a health care plan for each patient. Through the individualized appointments, the pharmacist partners with the patient. Trust is built and nurtured. The pharmacist is viewed as a resource for the physicians and the patients.
Relevant Statistics – Community Level

- 596,000 (8.3%) of New Jersey adults were diagnosed with diabetes as of 2010

Diabetes Epidemic at the National Level

Impact of Diabetes

- 25.8 million people, which is 8.3% of the U.S. population, are estimated to have diabetes
  - 18.8 million people have been diagnosed with diabetes
  - 7 million people are undiagnosed; in other words, are unaware they have diabetes
- 1.9 million people aged 20 years and older are newly diagnosed with diabetes each year
- The prevalence of diabetes in the United States increased by 128% from 1988 to 2008
- If present trends continue, 1 in 3 adults in America will have diabetes in 2050
- 79 million adults have prediabetes, which increases their risk of developing Type 2 diabetes later in life
- Diabetes is a major cause of heart disease and stroke
- Diabetes is the leading cause of kidney failure, nontraumatic lower-limb amputations, and new cases of blindness among adults in the United States
- Diabetes contributes to the death of 231,404 Americans each year

Cost of Diabetes

- Total cost of diagnosed diabetes in the United States = $245 billion per year
  - Direct medical costs = $176 billion per year
  - Indirect costs (e.g., disability, reduced productivity) = $69 billion per year
- Health care costs for a person with diabetes are 2.3 times higher than a person without diabetes
- 1 out of every 10 health care dollars is spent treating diabetes and its complications
