

COMMUNITY FACT SHEET

Pascua Yaqui Reservation of the El Rio Community Health Center Tucson, AZ

Program Overview

The mission of El Rio Community Health Center is to improve the health of the community by providing comprehensive, quality health care that is accessible to all who need it. Dedicated to serving all populations, including the underrepresented and uninsured, El Rio developed a clinic at the tribal headquarters of the Pascua Yaqui Reservation.

Program Partners

The clinic at the tribal headquarters of the Pascua Yaqui Reservation has a comprehensive team of providers, including pharmacists, physicians, nurse practitioners, physician assistants, and support staff who work together to coordinate care for the Pascua Yaqui tribe.

The El Rio Community Health Center system partners with the Health Services Advisory Group, the quality improvement organization for Arizona and the Patient Safety and Clinical Pharmacy Services Collaborative. Both of these organizations are committed to improving the quality of care provided to the diabetes population of focus in Project IMPACT: Diabetes. They also partner with the University of Arizona and offer a training site for pharmacy students and residents.

Community Champion: Marisa Rowen, PharmD

Patient Profile

El Rio's clinic on the Pascua Yaqui Reservation is located in the southwestern part of the Tucson metropolitan area. The clinic serves a Native American population. The majority of the patients are American Indian adults with Type 2 diabetes, hypertension, obesity and dyslipidemia. More than 40% of patients live below the federal poverty level.

Pharmacists' Role on the Collaborative Care Team

The Pharmacy-Based Diabetes Management Program provided at the Pascua Yaqui Reservation was developed using the same model of care that had been established in the El Rio Community Health Center system. Patients are referred to the pharmacist by their provider when they have newly diagnosed or uncontrolled diabetes. Pharmacists have collaborative practice agreements with prescriptive authority with the physicians that allow them to manage the patient's medication therapy. The pharmacists use their comprehensive understanding of medication therapy, including formulary guidelines and drug protocols, to make recommendations and changes in therapy regimens as needed. The pharmacist is responsible for monitoring a patient's medication therapy and making modifications when needed, continuous monitoring for improvement in patient outcomes, education of patients, identification/resolution of adherence and therapy related concerns, as well as monitoring for actual or potential adverse drug reactions. The pharmacist can also identify if referrals to other providers in the areas of ophthalmology, podiatry, nutrition or behavioral health may be needed based on what was identified during the pharmacy visits. The integration of pharmacists in the healthcare team at El Rio has helped to improve patient outcomes, including the patient's quality of life, improve medication adherence, and avoid medication-related complications.

Relevant Statistics – Community Level

- According to the CDC:

- 8.1% of adults in Arizona were diagnosed with diabetes in 2010¹
- According to the Arizona Health Department of Health Services Bureau of Tobacco and Chronic Diseases:
 - There has been an 80% increase in people diagnosed with diabetes from 1995 to 2010²
 - Considering that a third of the population with diabetes is undiagnosed, it is estimated that there are nearly 600,000 adults with diabetes in Arizona²

Diabetes Epidemic at the National Level

Impact of Diabetes^{3,4}

- 25.8 million people, which is 8.3% of the U.S. population, are estimated to have diabetes
 - 18.8 million people have been diagnosed with diabetes
 - 7 million people are undiagnosed; in other words, are unaware they have diabetes
- 1.9 million people aged 20 years and older are newly diagnosed with diabetes each year
- The prevalence of diabetes in the United States increased by 128% from 1988 to 2008
- If present trends continue, 1 in 3 adults in America will have diabetes in 2050
- 79 million adults have prediabetes, which increases their risk of developing Type 2 diabetes later in life
- Diabetes is a major cause of heart disease and stroke
- Diabetes is the leading cause of kidney failure, nontraumatic lower-limb amputations, and new cases of blindness among adults in the United States
- Diabetes contributes to the death of 231,404 Americans each year

Cost of Diabetes⁴

- Total cost of diagnosed diabetes in the United States = \$245 billion per year
 - Direct medical costs = \$176 billion per year
 - Indirect costs (e.g., disability, reduced productivity) = \$69 billion per year
- Health care costs for a person with diabetes are 2.3 times higher than a person without diabetes
- 1 out of every 10 health care dollars is spent treating diabetes and its complications
